

Accessories

Description of materials

MICROFIBER

Extremely thin fibers ten times smaller than a human hair.

Benefits of the material: great absorbing properties, no barrier to heat exchange, simple care, no pilling, long life

AERO BAMBOO

Aero bamboo, the material which is a mix of bamboo fibers and polyester-made microfiber, is becoming increasingly popular. While retaining all the valuable properties of bamboo, aero bamboo has the following advantages:

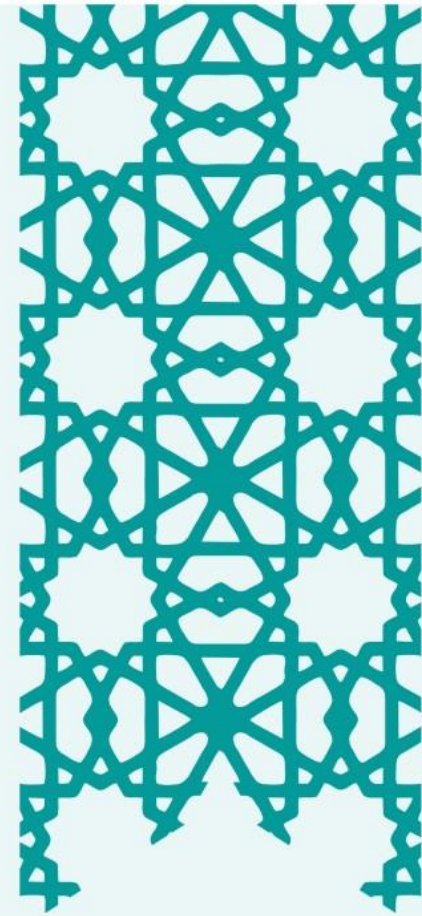

it neither pills nor stains; it prevents moisture from getting inside the fibers; it can be easily dried after a laundry, has increased water absorption and high durability.

POLYESTER FIBER (Super Drops)

Super Drops is a modern and environmentally friendly filling made of a high quality microfiber twisted in balls without using any adhesive components.

Due to its 'springy' structure, Super Drops combines special softness and stability of shape that does not change over time.

Description of materials

TICKING (100% COTTON)

It is a natural material made of cotton fibers. The surface of the material is exceptionally smooth.

Benefits: Incredible thickness is achieved through special weaving and impregnation.

Softness – through organic nature of the raw material.

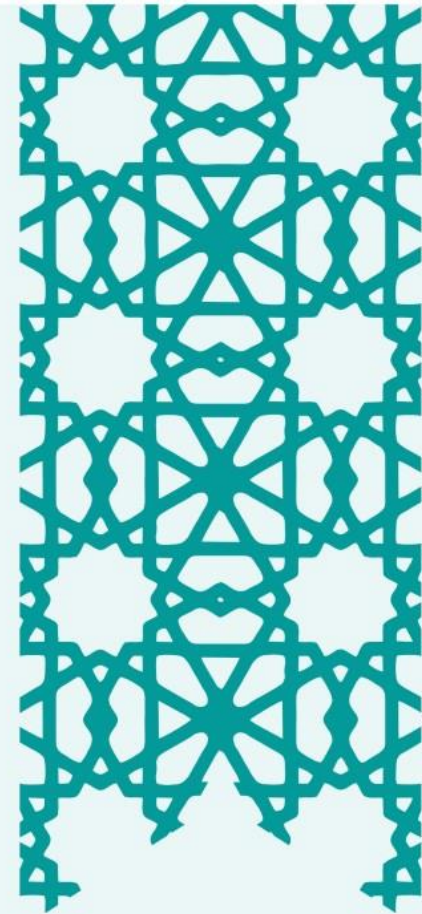

Durability – through mechanical stability. It's safe and environmentally friendly. It never causes any allergic reactions. Ticking is hydroscopic. It absorbs the moisture perfectly and dries quickly.

TENCEL

It's a fabric of a vegetable origin that has arrived from Australia.

'Vegetable origin' is literal here: the fabric is made by interlacing wood fibers of eucalyptus to obtain threads from cellulose pulp. The manufacturing is zero waste and harmless for the environment. The material is environmentally friendly, air-permeable, hypoallergic and crease-resistant.

Denge pillow

VERSATILE

Benefits:

- ✓ A classical model of medium firmness
- ✓ Versatility
- ✓ Suitable for people with sensitive skin
- ✓ Improves air exchange due to the state-of-the-art filling
- ✓ Maintains comfortable temperature regardless of the season
- ✓ Doesn't absorb smells
- ✓ Due to its bounciness, it retains anatomical properties and shape for a long time
- ✓ Cover made of natural cotton

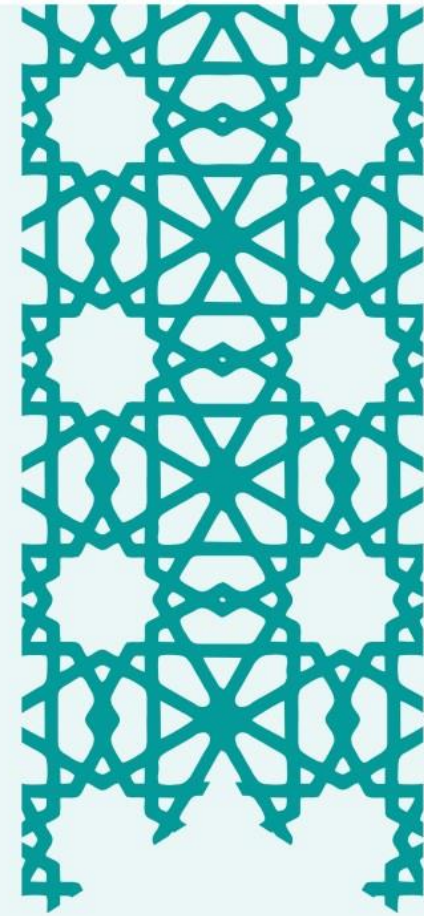

Composition:

Cover fabric: Ticking (100% cotton)

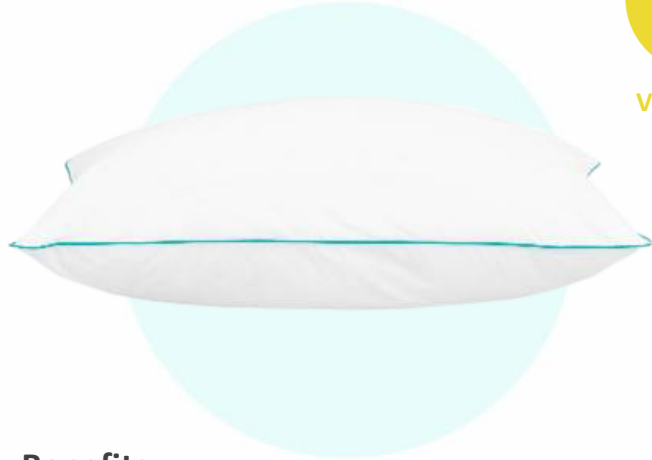

Filling: Aero Bamboo (10% bamboo fiber + 90% polyester fiber)

Size: 50*70

Height of the pillow – 16 cm

Kapak pillow

VERSATILE

Benefits:

- Adjusts to your comfort level
- Combination of natural fibers and modern high-tech fillings (10% bamboo fibers, 90% polyester)
- Unique membrane protects from moisture and microorganisms
- “Breathing” A-Vent valve for extra comfort
- Moisture-proof cover – protection of a pillow from moisture, dust, dirt and microorganisms
- Air-permeable anti-bacterial cover is perfect for people with sensitive skin

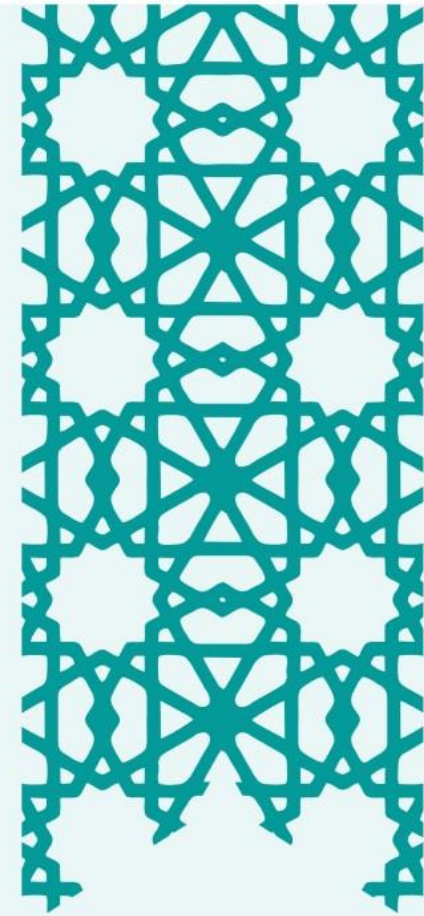

Composition:

Cover fabric: Ticking (100% cotton)

Filling: Aero Bamboo (10% bamboo fiber + 90% polyester fiber)

Size: 50*70

Height of the pillow – 16 cm

Matin latex pillow

ON THE SIDE

Benefits

- ✓ Open pore structure
- ✓ 100% air-permeable even when compressed
- ✓ Stays cool in summer and warm in winter
- ✓ Supports the best level of humidity and temperature during sleep
- ✓ Prevents compressing blood vessels and supports normal circulation
- ✓ Perfect spine position during sleep
- ✓ Maximum cervical spine relaxation
- ✓ Recommended for sleeping on the side

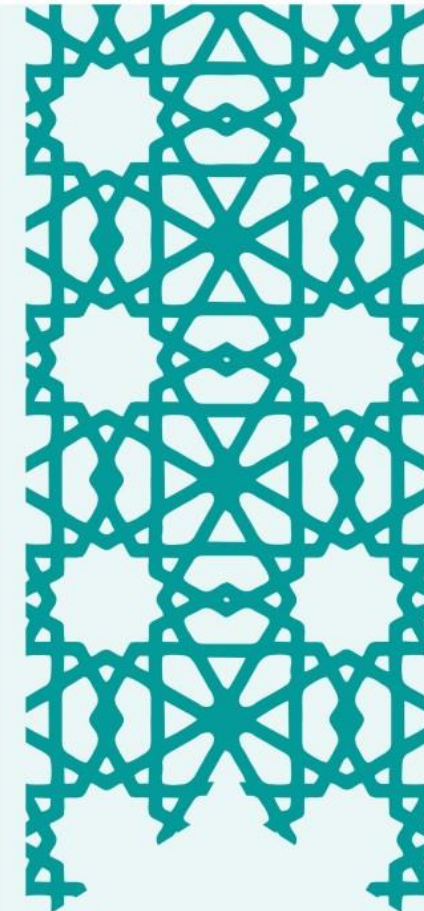

Composition:

Cover fabric:

Internal cover – microfiber, 100% polyester, 3D net – 100% polyester

External cover – knitted fabric

Filling: 80% natural latex, 20% synthetic latex

Covers

Saflik

Composition:

Fabric: terry (50% cotton, 50% polyester)
Moisture-proof protection layer
(100% polyurethane)

4 elastic bands in the corners

Dimensions:

090*200, 140*200, 160*200, 180*200

Raha

Composition:

Fabric:
Micro peach (100% polyester)

Moisture-proof protection layer
(100% polyurethane)

Dimensions:

090*200, 140*200, 160*200, 180*200

گیتہ سٹال

Hava blanket

Heat insulation and air permeability

It's warm and cozy to sleep under in the winter, and comfy to use in the summer due to great air permeability

Hygroscopicity

Eucalyptus fibers absorb moisture and get dry quickly due to their porous structure

Easy care

Wash in a washing machine and ventilate in fresh air

Hygienic

The porous structure of eucalyptus fiber ensures good volume, the best possible thickness and minimum weight of the filling

Lightness

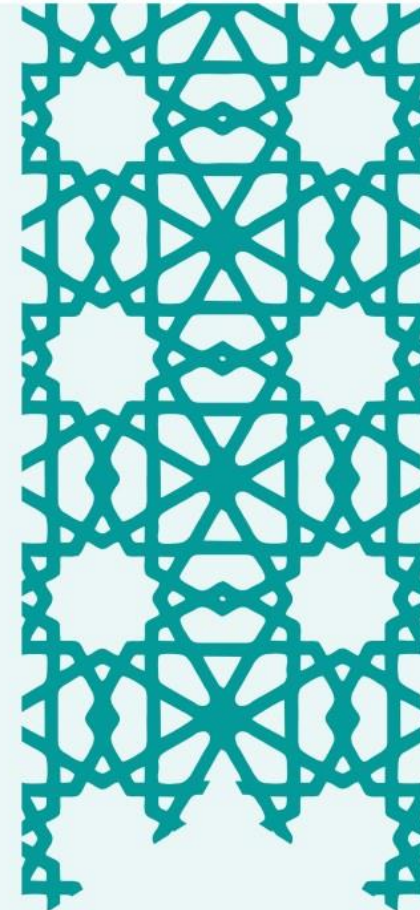

Fibers don't accumulate dust, they are absolutely harmless for human health. They don't have any characteristic odors

Size: 205*140, 205*172, 220*200

Composition:

Cover fabric – microfiber (100% polyester)

Filling – 15% Tencel eucalyptus fiber, 85% polyester fiber
